Innovative and future-oriented system solutions by ATRON

Integrated system solutions from one source

At the UITP World Congress & Exhibition 2015, ATRON's focus will be on innovative system solutions for public transport. Hardware and software for fare management, eTicketing, passenger information and ITCS/AVL systems are combined in one integrated comprehensive solution. The transport company receives a perfectly balanced system, turn-key from one source.

"It is our objective to make public transport more efficient and more customer-friendly," says Michael Huhn, Sales Manager Germany of ATRON electronic GmbH.

Mobile solutions perfectly integrated

Recently, ATRON has consistently expanded its portfolio with mobile solutions. The range includes the mobile AFR smart, the on-board computer on a tablet, modern smartphone control devices as well as the easily operable online sales system WebTick. All hardware and software components can be controlled comfortably from one location in the background system ATRIES and can be easily expanded at all times.

Presenting all possibilities on site

At Stand 4B 148 in Hall 4, ATRON will gladly present the complete portfolio extensively and in great detail during a personal meeting. Please set up an appointment or order a free ticket voucher via e-mail to uitp@atron.de.
