### Mobile ticketing with flexible control

ATRON's Smart Ticket Sales and Inspection apps offer public transport companies a cost-effective and quickly applicable alternative to the conventional sales and control devices. The software can be installed on various smartphones or industrial devices with an Android operating system. It is a fast and flexible solution for operated ticketing and controls on demand on buses, trains and ferries.

The ATRON ASTS/ASTI applications are a software solution for mobile ticketing and the inspection of paper tickets and eTickets. On smartphones, the apps

provide the entire functional range of the mobile ATRON terminals. The complete integration into the ATRON DEBAS system guarantees the extensive functionality of the ATRIES background software for ticketing, AVL, passenger information and billing.

The capabilities of the ASTS/ASTI applications at a glance are: paper and eTicketing; 2D barcode tickets; ID-based tickets; payment and control; applicable online and offline; mobile customer centre; applicable on transport on demand; and the AVL client.
